

Electronic Payments Services

Credit & Debit Card Payments

'CP Terminal' is a web based secure system for processing single or recurring credit or debit card transactions for all of your on-line donations and other payments. It is accessible on line and can be linked to your website enabling transactions to be processed straightaway and authorised in real time.

Chip & PIN Solutions

If you wish to take card payments where the card payer is present (fundraising events, retail outlets, etc) then chip & PIN is the ideal solution. It is available either as a permanent or temporary solution. The terminals can either be wireless, providing the ability to roam with the device, or with a hard wired connection to your telephone line.

Benefits include

- Increases income through ease of use of credit facilities
- Reduces the cost of processing donations and other income
- Improved reporting through on-line reporting suite
- Increases security and accuracy of card payments
- Increases efficiency of processing
- Email acknowledgement of donations and payments
- Increases collection through gift aid recording & reporting
- Flexible solution which includes wireless terminals for events
- Saves time in collecting money from events
- Wireless terminals can be hired on a short-term basis

I was told by the previous treasurer that getting the money for the tickets and pre-ordered wine was a complete nightmare – having online payment processing took away all the hassle. Having the chip & PIN facility ensured that money could be taken on the evening (raffle prizes, auction bids) as well as allowing our guests to use their credit cards to purchase drinks at the bar with minimal effort.
